Taking pictures is only the beginning. Learn how to take your photographs to a new artistic level with Corel Painter™ IX!

Discover how Corel Painter™ IX can help you transform your photographs into paintings that can be printed on beautiful canvas. Painter IX is the only digital imaging software that gives you the power of over 800 natural media brushes by default — without relying solely on "canned" filters or scripts.

This presentation will focus on a variety of natural media techniques and shortcuts for hand painting your photographs. You will learn how to blend photo subjects into beautiful painted backgrounds, hand paint hair, skin & fur to reflect photo realism, and how to quickly create sketches and loose paintings that reflect a more artistic attitude.

The end result will be a better understanding of Painters capabilities and an insight into the meshing of the natural media world with the digital.

Presenters Bio:

Tanya Lux took on her full time Product Specialist position with COREL in 2002 and is based in Chicago, IL. Her background includes years of work as a designer, an art director & software trainer. This experience has allowed her to work with, and to train on, a variety of design-based software applications. She has conducted hundreds of seminars and training sessions in the U.S., Canada, and Asia focusing on many design and development topics. Her experience allows her to bring practical design knowledge to the world of digital art.
